Termometro a massima e minima .. Tm
Termometro registratore .... Tr
Dato incerto .... ?
Dato mancante .... »
Dato interpolato .... [ ]

Sono stampati in **grassetto** e in *corsivo* rispettivamente i valori massimi ed i valori minimi

CONTENUTO DELLE TABELLE

I dati sono trasmessi da Osservatori o da Stazioni termopluviometriche controllati o dipendenti direttamente dall'Ufficio.

Ogni stazione é fornita di un termometro a massima e di un termometro a minima, oppure di un termometro a massima e minima uniti, che vengono osservati ogni giorno alle ore 9 antimeridiane; qualche stazione adibita alle misure termometriche dotata anche di termometro registratore.

Le letture eseguite ai termometri a massima e a minima vengono assegnate al giorno stesso dell'osservazione.

Le stazioni sono ordinate nelle tabelle secondo la rispettiva posizione idrografica.

Le tabelle sono precedute dall'elenco e caratteristiche delle stazioni termometriche che hanno funzionato nell'anno.

TABELLA I. - Sono riportati, per le stazioni che hanno funzionato regolarmente nell'anno, i valori massimi e minimi rilevati giornalmente, e le rispettive medie mensili, unitamente alla temperatura media del mese e dell'anno cui si riferiscono le osservazioni e le corrispondenti medie del periodo.

TABELLA II. - Per le stazioni della tabella I sono riportate:

a) le medie mensili ed annue delle massime e delle minime temperature osservate giornalmente e le medie mensili ed annue delle temperature diurne. Come valore «diurno» é assunto il valore della semisomma delle temperature massime e minime osservate in uno stesso giorno.

b) le temperature estreme (massima e minima) osservate in ogni giorno e nell'anno, ed il giorno nel quale sono state osservate.

Tutte le temperature riportate sono espresse in gradi centigradi e corrispondono alle letture effettivamente eseguite, non essendosi effettuata la riduzione al livello del mare.

CONSISTENZA DELLA RETE TERMOMETRICA AL 31 DICEMBRE 1990

Sezione B - PLUVIOMETRIA

ABBREVIAZIONI E SEGNI CONVENZIONALI

Pluviometro comune	P
Pluvionivometro	Pn
Pluviometro registratore	Pr
Pluviometro totalizzatore	Pt
Precipitazione nevosa (misurata al pluviometro)	*
Precipitazione nevosa (dedotta dalla neve al suolo)	*̣
Precipitazione nevosa mista ad acqua	*̤
Precipitazione nulla	—
Dato incerto	?
Dato mancante	»
Dato interpolato	[ ]
Gocce	goc.
Fiocchi (precipitazione nevosa non misurabile)	fioc.

TERMINOLOGIA

1\. - ALTEZZA DI PRECIPITAZIONE (mm) : quoziente del volume di acqua raccolta nel pluviometro (compresa eventualmente la neve fusa) per l'area della superficie orizzontale dell'imbuto raccoglitore.

2\. - GIORNO PIOVOSO : giorno in cui é stata misurata un'altezza di precipitazione uguale o superiore ad un millimetro.

3\. - INTENSITÀ MEDIA DI PRECIPITAZIONE (in un intervallo di tempo) : quoziente fra l'altezza di precipitazione nell'intervallo e la durata di questo.

CONTENUTO DELLE TABELLE

Le tabelle sono precedute dall'elenco e caratteristiche delle stazioni di osservazione che hanno funzionato nell'anno.

I valori delle precipitazioni riportati sono espressi in millimetri di acqua e comprendono pioggia e neve fusa.

TABELLA I. - Per ogni stazione riporta la quantità di pioggia caduta giornalmente ed i totali mensili ed annui della precipitazione e del numero dei giorni piovosi.

Per le stazioni con apparecchiatura a lettura diretta (pluviometri e pluvionivometri) le osservazioni vengono eseguite ogni giorno, generalmente alle ore 9, ed il risultato viene attribuito al giorno stesso della misura: il valore rappresenta quindi la quantità di precipitazione caduta nelle 24 ore precedenti la misura.

Per le stazioni dotate di pluviografo, si riporta per ogni giorno, la precipitazione che dal diagramma risulta caduta nelle 24 ore comprese fra le ore 9 del giorno precedente e le ore 9 del giorno di cui si tratta.

Con il carattere grassetto é stampato il massimo giornaliero misurato per ogni mese.

TABELLA II. - Per le stesse stazioni di cui alla tabella I, riporta i totali mensili ed annui delle quantità di precipitazione.

Per ogni stazione é riportato in grassetto il valore maggiore ed in corsivo quello minore.

TABELLA III. - Per le stazioni con pluviografo, riporta i valori più elevati delle precipitazioni registrate per 1, 3, 6, 12 e 24 ore consecutive appartenenti o no allo stesso giorno.

Sono considerate le precipitazioni iniziate dopo le ore 0 del primo gennaio e quelle terminate dopo le ore 24 del 31 dicembre.

TABELLA IV. - Per alcune stazioni, opportunamente scelte, riporta i massimi valori delle precipitazioni verificatesi per 1, 2, 3, 4 e 5 giorni consecutivi, appartenenti o no allo stesso mese. Sono considerati i periodi il cui inizio cade entro l'anno anche se eventualmente terminati nell'anno successivo.

Per le durate da 2 a 5 giorni le altezze possono essere talvolta uguali a quelle di durata inferiore; il periodo indicato é sempre quello nel quale si é verificata l'altezza considerata. E ciò per evitare che il massimo di 2 giorni possa risultare minore a quello di 1 giorno e così via.

TABELLA V. - Riporta valore, durata e data delle precipitazioni di maggiore intensità e di breve durata registrate dai pluviografi.

TABELLA VI. - Riporta per alcune stazioni e per i mesi da gennaio a maggio e da ottobre a dicembre, quando possono verificarsi precipitazioni [illegible]

a) le altezze, in centimetri, degli strati nevosi sul suolo presenti nell'ultimo giorno delle tre decadi mensili;

b) la quantità di neve caduta nel mese;

c) il numero dei giorni nei quali si sono avute le precipitazioni nevose;

d) il numero complessivo dei giorni di permanenza della neve sul suolo.

M E T E O R O L O G I A

Nel presente capitolo vengono riportati per l'Osservatorio Meteorologico di VENEZIA (Istituto Cavanis) i valori della pressione atmosferica, dell'umidità relativa, della nebulosità, della velocità e direzione del vento. I valori di temperatura e di precipitazione sono riportati nelle rispettive Sezioni A e B.

CONTENUTO DELLE TABELLE

TABELLA I. - Riporta i valori medi giornalieri, mensili ed annui della pressione atmosferica espressa in mm di mercurio, a zero gradi e non ridotta al mare.

TABELLA II. - Riporta i valori medi giornalieri, mensili ed annui della umidità relativa. Il valore dell'umidità relativa (espresso in centesimi) è quello del rapporto fra tensione del vapore acqueo misurato e la tensione massima corrispondente alla temperatura rilevata durante la osservazione.

TABELLA III. - Riporta i valori medi giornalieri della nebulosità espressa in decimi di cielo coperto, con indicazione della specie delle nubi.

TABELLA IV. - Riporta i valori della velocità del vento espressa in km/h. I valori derivano da 3 letture giornaliere durante le quali vengono individuate anche le corrispondenti direzioni del vento.

I valori medi giornalieri della pressione atmosferica e della umidità relativa corrispondono alla media aritmetica delle osservazioni eseguite alle ore 8, 14 e 19.

Per tutti gli elementi meteorologici riportati in questo capitolo viene adottato il giorno civile, dalle ore 0 alle ore 24.

ABBREVIAZIONI E SEGNI CONVENZIONALI
